

### Abstract

5 The present invention provides a system and method for  
creating an exclusive ID to a split lot in a multiple-plant  
enterprise. When a lot is divided, the split lot is first  
10 assigned a main code by a main ID unit. When the split lot is  
divided in the initial plant, a split ID unit assigns a split  
code to the split lot according to a sequence. When the split  
lot is not divided in the initial plant, the split ID unit  
15 assigns a plant code and a split code according to a sequence  
to the split lot. All of the codes of the lot are stored in an  
ID storage unit for lot administration.
